New OG21-reports on low-emission technologies

The Norwegian petroleum sector is going to reduce its GHG emissions with 50% by 2030. OG21 together with DNV have assessed technologies that could be important for meeting the objective.

PUBLISHED 6 JAN 2023

The new reports on low-emission technologies were launched at the OG21-forum November 16th, 2022.

The reports are available for downloading here:
